Windows (QT & Desktop wallets)

First, turn off your wallet

1- Make a copy of your wallet.dat

a- Press the windows key + R

b- Type : %appdata%\Electra and then click on OK

c- Electra folder is open, copy and paste the file Wallet.dat in a safety location, best in other hard drive, usb key, ect...

If you are updating your wallet after the fork block 182,750 (check the current block in https://www.electraexplorer.com), you must reset the blockchain: In this Electra folder, delete everything EXCEPT wallet.dat

2- Uninstall your current wallet

3- Download and install the last version:
https://www.electraproject.org/wallets

4- Run the wallet and wait for the full sync

If you were using the Desktop wallet, your differents accounts/addresses are listed in: File => Receiving addresses
